

Tyson Paul

Senior QA Automation Engineer | SDET

Dubai, UAE | +971 58 636 8389 | tysonpaul09@gmail.com

Portfolio: tyson1403.github.io | GitHub: github.com/tyson1403 | LinkedIn: [tyson-paul-140325mar](https://www.linkedin.com/in/tyson-paul-140325mar)

ISTQB CT-AI | ISTQB Agile Tester | ISTQB CTFL | AT*SQA Test Automation | M. Eng. Management, RMIT University

Professional Summary

Senior QA Automation Engineer and SDET with 7+ years of experience building UI and API automation for enterprise applications. At LiSEC Automation, built the Cypress and ReadyAPI frameworks from scratch, architected the Playwright/TypeScript framework now standard for new projects, led the Cypress-to-Playwright migration and grew automated coverage from 30% to 90%.

Strong in CI/CD integration, OAuth2/JWT testing, SQL data validation and flaky-test reduction. Applies AI-assisted testing in daily work, including custom QA agents, Playwright MCP and GitHub Copilot adoption that cut test-case drafting time by about 55%.

Skills

- **Test automation:** Playwright, Cypress, WebdriverIO, Selenium WebDriver
- **API and auth testing:** ReadyAPI, Playwright API testing, REST, OAuth2, JWT, JSON Schema validation
- **Performance and accessibility:** k6 (load, stress, spike, SLO thresholds), axe-core (WCAG 2.1 AA)
- **Data validation:** SQL, database and test-data verification
- **Languages:** TypeScript, JavaScript, Python
- **CI/CD and tooling:** Git, GitHub Actions, Jenkins, Docker
- **Test management:** Jira, Xray
- **AI in testing:** GitHub Copilot, Playwright MCP, custom QA agents, reusable AI skills, AI-assisted test migration
- **Practices:** Agile/Scrum, shift-left testing, test strategy, data-driven and regression testing, UAT, defect triage, quality metrics, mentoring

Certifications (verifiable on the AT*SQA official list)

- ISTQB Certified Tester, AI Testing (CT-AI), July 2026
- AT*SQA Test Automation micro-credential, July 2026
- ISTQB Certified Tester, Agile Tester, November 2025
- ISTQB Certified Tester, Foundation Level (CTFL), December 2024

Experience

Senior QA Automation Engineer, LiSEC Automation LLC

Dubai, UAE | March 2022 to Present

Products: Production Planning, Order Management (Order Editor), User Management, Customer Management

Automation frameworks

- Built the company's first UI (Cypress) and API (ReadyAPI) automation frameworks from scratch, moving the team from manual testing to automation.
- Architected a reusable Playwright/TypeScript framework for UI and API testing with shared fixtures, test-data utilities, environment configuration and CI/CD execution; established it as the standard for new projects, including Production Planning and Order Management.
- As suites grew past 200 tests per project (one beyond 600), led the migration from Cypress to Playwright using an AI migration agent, working in small batches to limit hallucination risk, with human review and existing quality gates retained.
- Migrated one 600+ test project in a single supervised session, using the Playwright MCP self-healing loop to fix failing tests, then retired Cypress and the split plugin.

Test coverage and reliability

- Grew automated coverage from 30% to 90% across five product areas (User, Customer, Order, Production, Delivery) with the first 500+ UI tests, placing each test at the right layer to avoid redundant coverage.
- Cut Cypress regression time from 90 to 55 minutes through parallel runs with cypress-split and reusable utilities.
- Fixed flaky UI and API tests by moving to dynamic Python-generated test data, giving stable CI/CD runs with fewer retries, and wrote Python scripts for log parsing and environment setup that removed 4+ hours of manual configuration per sprint.
- Owned OAuth2 and JWT authentication testing for the Core platform library with request/response and JSON Schema validation, and verified data end to end across UI, API and database layers using SQL.

AI-assisted testing

- Cut test-case drafting time by about 55% and flaky-test rates by 80% by introducing GitHub Copilot to the QA team with prompt training, and built AI agents and reusable skills that help testers and developers work faster.

Collaboration and leadership

- QA engineer in one of four cross-functional teams (5 to 6 developers each) and primary QA contact across multiple parallel value streams through two-week sprints and major releases, with zero critical defect escapes to production in 12+ consecutive releases.
- Cut new-tester ramp-up time by about 70% by setting up quality metrics, onboarding templates and training.
- Joined planning sessions with developers and identified 40+ missing scenarios before development, preventing late-cycle P1 defects.

Software Test Engineer (Automation Focus), WebReinvent Technologies Pvt. Ltd.

Delhi, India | July 2021 to March 2022

- Built WebdriverIO regression suites with API checks across three client platforms (e-commerce, SaaS, and talent acquisition for speakers and actors), reaching 85% automated coverage in under 6 months.
- Cut flaky test failures by 60% by reworking element locators, adding smart waits and cleaning up test data.
- Set QA standards adopted across 3 engineering teams through shared utilities and a common test-writing approach, cutting new test creation time by 40%.
- Wrote Python scripts for test-data seeding and report parsing, cutting regression feedback time from 45 to 12 minutes.

Career Development, Melbourne, Australia and India

September 2015 to June 2021

Completed a Master of Engineering Management at RMIT University (December 2018), then built hands-on testing and automation skills independently until returning to full-time QA work in July 2021.

Software Test Engineer, Credence Systems Pvt. Ltd.

Delhi, India | August 2013 to September 2015

- Designed and ran 200+ test cases across 4 software modules, including e-commerce websites; structured defect triage and root-cause analysis contributed to a 25% drop in post-release defects.
- Wrote the team's first Selenium WebDriver scripts, cutting manual regression testing time by 35%.
- Took part in sprint planning and retrospectives, improving estimation accuracy by 20% through data-driven test-effort forecasting.

Personal Projects

- [SkyLane Air: Playwright + k6 test automation](#) (in progress): a demo airline booking app with around 100 Playwright API, UI, hybrid and accessibility (axe-core) tests using page objects and custom fixtures, five k6 scenarios (smoke, load, stress, spike, oversell) with p95 SLO thresholds, Docker Compose, and GitHub Actions CI with nightly performance runs.
- [Playwright Automation Platform](#) (in progress): a reusable TypeScript package that centralises Playwright versioning and a shared config factory for consuming projects, distributed through versioned git tags, with CI on GitHub Actions.

Education

- Master of Engineering Management, RMIT University, Melbourne, Australia (December 2018)
- Bachelor of Engineering, Electronics & Communication, Oriental Institute of Science & Technology, Jabalpur, India (June 2013)
