ISTQB CT-AI | ISTQB Agile Tester | ISTQB CTFL | Master of Engineering Management, RMIT University

PROFESSIONAL SUMMARY

Senior QA Automation Engineer and SDET with 7+ years of experience designing scalable UI and API automation for enterprise applications. At LiSEC Automation, built Cypress and ReadyAPI automation frameworks from the ground up and later architected the Playwright framework adopted for new projects, while leading the migration of existing Cypress suites.

Hands-on with Playwright, Cypress, WebdriverIO, Selenium, TypeScript, JavaScript and Python, with experience integrating automation into CI/CD pipelines, designing dynamic test-data strategies, testing OAuth2/JWT authentication, validating data with SQL and improving test reliability across multiple enterprise products.

Combines quality engineering with AI-assisted testing, including custom QA agents, reusable AI skills and GitHub Copilot adoption that reduced test-case drafting time by approximately 55%. Experienced in test strategy, shift-left quality, mentoring, quality metrics and cross-functional delivery.

CORE COMPETENCIES

Testing: Test planning • Regression testing • Functional & UAT testing • API & authentication testing • SQL data validation • Data-driven testing • Defect triage

Automation & Frameworks: Playwright framework architecture • Cypress-to-Playwright migration • UI & API automation • Reusable test utilities • Flaky-test reduction • CI/CD integration

Quality Engineering & Leadership: AI-assisted testing • QA agents • Test strategy • Shift-left quality • Mentoring • Quality metrics • Cross-functional delivery

CERTIFICATIONS

- ISTQB Certified Tester – AI Testing (CT-AI), July 2026
- ISTQB Certified Tester – Agile Tester, November 2025
- ISTQB Certified Tester – Foundation Level (CTFL), December 2024
- AT*SQA Test Automation micro-credential, July 2026

[Verify all credentials on the AT*SQA official list](#)

PROJECTS

LiSEC Automation: Production Planning • Order Management (Order Editor) • User Management • Customer Management. UI and API automation on Cypress, ReadyAPI and Playwright/TypeScript.

WebReinvent Technologies: Speaker talent platform • Actor talent platform. WebdriverIO regression suites with API validation.

Credence Systems: E-commerce websites. Test design, execution and first Selenium WebDriver automation.

EXPERIENCE

Senior QA Automation Engineer

LiSEC Automation LLC | Dubai, UAE | March 2022 – Present

Projects: Production Planning, Order Management (Order Editor), User Management, Customer Management

- Built the company's first UI (Cypress) and API (ReadyAPI) automation framework from scratch, moving the team from manual testing to automation.
- Architected a reusable Playwright/TypeScript automation framework covering UI and API testing, with shared fixtures, test-data utilities, environment configuration and CI/CD execution; established it as the standard for new projects including Production Planning and Order Management.
- Led the migration of existing Cypress suites to Playwright (roughly 200–300 tests per project) using an AI migration agent with human review and existing quality gates retained, working in small batches of spec files to limit hallucination risk; migrated one 600+ test project in a single supervised session, using the Playwright MCP self-healing loop to fix failing tests, and retired Cypress and the split plugin.
- Owned authentication testing for the Core platform library, covering OAuth2 and JWT token flows with request/response and JSON Schema validation.
- Verified data end to end across UI, API and database layers using SQL queries.
- Designed UI and API test coverage across five product areas (User, Customer, Order, Production and Delivery), placing tests at the appropriate layer to minimise redundant coverage and improve execution efficiency.
- Created AI agents and skills that help testers and developers work faster, and introduced GitHub Copilot to the QA team with prompt training, cutting test-case drafting time by about 55%.
- Fixed flaky UI and API tests by switching to dynamic test data generated with Python, and wrote Python scripts for log parsing and environment setup, making CI/CD runs stable with fewer retries.

- Served as the primary QA point of contact across multiple parallel value streams, typically supporting cross-functional teams of 5–6 developers and one QA engineer through two-week sprints and major releases.
- Joined planning sessions with developers to spot missing scenarios early, so fewer bugs showed up late in the cycle.
- Set up quality metrics, onboarding templates and training for new testers, cutting their ramp-up time by about 70%.

Software Test Engineer (Automation Focus)

WebReinvent Technologies Pvt. Ltd. | Delhi, India | July 2021 – March 2022

Projects: Speaker talent platform, Actor talent platform

- Built WebdriverIO regression suites with API checks for client platforms, including a speaker talent platform and an actor talent platform.
- Made unreliable test suites stable by reworking element locators and cleaning up test data.
- Set QA standards for the team with shared utilities and a common way of writing tests.
- Wrote Python scripts for seeding test data and parsing test reports, giving faster feedback during regression cycles.

Higher Education & Career Break

Melbourne, Australia | September 2015 – June 2021

- Completed a Master of Engineering Management at RMIT University (graduated December 2018).
- After graduating, took a career break focused on hands-on learning in software testing and automation; remained in Australia during 2020–2021 because of COVID-19 travel restrictions, then returned to India and resumed full-time QA work in July 2021.

Software Test Engineer

Credence Systems Pvt. Ltd. | Delhi, India | August 2013 – September 2015

Projects: E-commerce websites

- Wrote and ran test plans and test cases for several software modules, including e-commerce websites, and took part in bug triage and sprint planning.
- Wrote the team's first Selenium WebDriver scripts, which cut down manual testing time.
- Logged and tracked bugs through to fix, working closely with developers and other teams.

TECHNICAL SKILLS

- **Test Automation:** Playwright, Cypress, WebdriverIO, Selenium WebDriver
- **API Testing:** ReadyAPI, Playwright API testing, REST APIs, OAuth2, JWT, JSON Schema validation, request/response validation
- **Database & Data Validation:** SQL, database validation, test-data verification
- **Programming & Scripting:** JavaScript, TypeScript, Python
- **CI/CD & DevOps:** Git, GitHub, GitHub Actions, Jenkins, Docker
- **Test Management:** Jira, Xray
- **AI in Testing:** GitHub Copilot, Playwright MCP, custom QA agents, reusable AI skills, AI-assisted test migration
- **Ways of Working:** Agile/Scrum, shift-left testing, data-driven testing, regression testing, UAT

EDUCATION

Master of Engineering Management

RMIT University | Melbourne, Australia | December 2018

Bachelor of Engineering – Electronics & Communication

Oriental Institute of Science & Technology | Jabalpur, India | June 2013
